

TeraView Signs Sales and Service Agreement with ACE Solution

TeraView Signs Sales and Service Agreement with ACE Solution to Drive Growth in Taiwan and People's Republic of China

TeraView is pleased to announce that it has signed an agreement with ACE Solution for the sales and service of its advanced semiconductor packaging inspection tool in Taiwan and People's Republic of China.

Zhubei, Taiwan – 1 December 2015– On the back of strong demand for its fault isolation and quality assurance product in advanced integrated circuits, TeraView, (<http://www.teraview.com/>) the pioneer and leader in Terahertz solutions, is pleased to announce that it has signed a collaborative sales and service agreement with ACE Solution (<http://www.acesolution.com.tw>) to sell and support TeraView's semiconductor inspection systems in Taiwan and People's Republic of China.

TeraView and ACE have already qualified interest from several leading semiconductor and IC packaging companies in the region, and will now work together to provide demonstration and front-line support facilities, as well as joint marketing of the tool to customers.

TeraView's proprietary Electro Optical Terahertz Pulse Reflectometry (EOTPR) technology provides a 5 micron resolution capability in isolating faults within advanced integrated circuits for mobile phones and computing, including complex packages such as Package on Package (PoP), flip chip, and 3D package with Through Silicon Vias (TSVs). Introduced in June 2010, EOTPR has been widely accepted by advanced IC package failure analysis community, and this technology is ready to be deployed in the high volume manufacturing environment for quality assurance inspection.

"As we ramp up our sales activities in the region, we are gearing ourselves up to support our customers" said Don Arnone, CEO of TeraView. "Clearly Taiwan will be a key market for our EOTPR product, and with ACE as our partner, we feel well-placed to maximise its potential whilst also meeting the exacting support and service requirements of our customers. Alongside ACE, we look to build a strong and lasting presence within the Taiwanese and Chinese semiconductor and IC packaging inspection markets."

About Terahertz and EOTPR

Terahertz light lies between infrared and microwaves, and as such has unique properties which enables it to pass through objects and to transmit images and compositional (spectroscopic) information that is ordinarily hidden. Terahertz is non-destructive, safe and fast, making it the ideal inspection and imaging modality for many applications. Electro Optical Terahertz Pulse Reflectometry (EOTPR) is the world's first use of THz in Time Domain Reflectometry (TDR) application to isolate the location of faults and manufacturing quality variations in IC packaging.

About TeraView (www.teraview.com)

TeraView (www.teraview.com) is the world's first and leading company solely focused upon the application of Terahertz light to provide solutions to customer issues. A spin out from Toshiba and Cambridge University, TeraView has developed its proprietary technology across a number of markets. These include fault analysis and quality assurance for semiconductor chips used in mobile computing and communications, as well as non-destructive inspection of high value coatings used in the automotive, pharmaceutical, food and solar industries. Headquartered in Cambridge UK, sales and customer support are available throughout the Far East, North America and Europe either directly or through a network of distributors.

About ACE Solution (www.acesolution.com.tw)

The mission of ACE Solution is customer oriented. We focus on the RF electrical market with the strong technical supporting. ACE Solution provides the professional, innovative, passionate, multi-function integrating technique and solutions. In order to enhance the product quality, improve the yield rate and to increase Time to Market (TTM) / Time to Volume (TTV) for the customers of electrical component, device, and the system manufacture, we need to provide the products and service to achieve the expectation of customers.

Steve Hsu, CEO of ACE Solution, said "It is great opportunity to enlarge our business to cooperation with TeraView THz professional technology and EOTPR solution in Taiwan and China."
